

GUNNAR NEUMAN

AI IMPLEMENTATION · BUSINESS SYSTEMS · PRODUCT

Milwaukee, WI · [YOUR PHONE] · [CONFIRM EMAIL]

gunnarneuman.com · Case study: gunnarneuman.com/projects/home-services-crm

SUMMARY

AI implementation and product professional with five years across sales operations, product launches, and client delivery, plus the hands-on capability to build working systems. I map current workflows, decide where AI belongs and where deterministic software or human judgment is the better answer, build a testable first version, and plan the pilot that shows whether it worked.

EXPERIENCE

AI Product & Implementation, Independent

Milwaukee, WI · Oct 2025 – Present

- Built a full home-services CRM demonstration integrating AI across customer calls, lead qualification, call summarization, follow-up, quote preparation, appointment coordination, and review management, with human approval required for all customer-facing actions.
- Published the implementation reasoning as a case study: where AI is used and where deterministic software is used instead, defined failure and fallback behavior, a 30/60/90 pilot plan, and the metrics that would decide whether to expand or stop.
- Designed and built a live portfolio assistant on a constrained tool set: read-only actions run automatically, while consequential actions such as sending email and booking against a live calendar stop for explicit human confirmation. State and permissions are enforced in software, not by the model.
- Built and launched PrepMe, a live AI interview platform that generates and conducts a personalized mock interview from a candidate's résumé and target job description.

Founder, TouchPoint Marketing Solutions

Denver, CO · Mar 2023 – Oct 2025

- Ran client engagements end to end: discovery, scoping, build, launch, performance reporting, and handoff to a client team that had to operate the result without me.
- Translated business goals into scoped and delivered solutions across websites, e-commerce, customer acquisition, and reporting.
- Used campaign and customer data to report results and adjust activity; coordinated timelines, budgets, vendors, and client communication across concurrent projects.

Sales Rotational Program, Sub-Zero Group, Inc.

Madison, WI · Jun 2020 – Feb 2023

- Built custom Power BI reporting tools and trained external sales teams to adopt them, changing how those users accessed and applied sales data day to day.
- Selected as the inaugural participant in a 2.5-year rotational program spanning sales operations, product marketing, product launch, showroom sales, and dealer support.
- Supported cross-functional product launches through competitive research, positioning, naming, imagery, sales materials, and retail execution.
- Gathered dealer and distributor feedback, supported product training, and translated product information into practical customer-facing resources.

EDUCATION

University of Wisconsin–Milwaukee; Bachelor of Business Administration

Majors in Marketing and Supply Chain Management · Central European international business program

SKILLS

AI & Implementation: AI-enabled workflow design, human-in-the-loop systems, tool calling and orchestration, structured outputs (JSON Schema), prompt design, evaluation and error analysis, requirements definition, process mapping, pilot design, rapid prototyping

Business: Stakeholder discovery, client management, sales operations, cross-functional delivery, user training and adoption, ROI reporting, go-to-market

Technical: React, TypeScript, REST APIs, OpenAI API, Google Calendar API, Twilio, Power BI, Claude, Cursor, Codex, vo
